DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on December 8, 2010 has been entered.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-8 and 10-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Landis (U.S. 5,294,015). Landis teaches an arrangement comprising an open-ended container 22 and closure 20 therefor. The container comprises at least one projection 46 extending at least partially around its outer surface adjacent the rim 26 of its open, upper end. The closure comprises a cover 30 for extending over the open upper end and a skirt 38 depending therefrom having an upper portion at lead line 74 and a lower portion below hinge line 61. the lower portion could also be considered the portion extending at and

below projections 48. The lower portion of the skirt may be flipped between a raised configuration, shown in figure 6, for mounting and removal of the cover on the container and a lowered configuration, shown in figure 7, in which it engages with the projection of the container thereby to retain the cover on the container. The whole of the lower portion of the skirt is divided into at least two discrete peripheral sections, seven are shown in the drawings, that may be flipped between the raised and lowered configurations independently of each other, as discussed in col. 8 line 55 through col. 9 line 37. The channel is shown at 40. The inwardly directed projection is shown at 48 which engages with 46, as shown in figure 11. The slits are formed after initial tearing of the frangible lines 64, as discussed in col. 9 lines 18-37.

Response to Arguments

5. Applicant's arguments filed December 8, 2010 have been fully considered but they are not persuasive. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection. The new grounds of rejection was necessitated by the amendment filed December 8, 2010.

Conclusion

6. **THIS ACTION IS MADE NON-FINAL.**
